

Invitation to a presentation

Climate Change: Will Sri Lanka be spared?

The term "climate change" is sometimes used to refer to all forms of climatic inconsistency, but because the Earth's climate is never static, the term is more used to imply extreme change from one climatic condition to another. In some cases, climate change has been used synonymously with the term, global warming. There is world-wide noise over "climate change". Is this a combination of misinterpreted and misguided science, media hype, and political spin? Or is this something that we in tourism need to learn, understand and play our part in making a difference???
